Digital Transformation >

Partner Manager use case We partnered with a multinational manufacturing company that wanted to automate its supply chain management. Its goal was to synchronize the connections, parsing, and aggregation of data from multiple suppliers into its centralized database. The PortX Partner Manager solution we deployed automated the company's supply chain and data channels to create a streamlined process for partner management

## Automate, track, and manage B2B integrations

Many organizations drown in manual configuration, testing, and fixing errors every time they onboard a new trading partner. With Partner Manager, B2B messaging protocols like EDI are simple enough that even non-developers can manage connections.

## Connect to any network

With built-in compatibility, Partner Manager supports all industry standard protocols to simplify connectivity with your trading partners. Protocol support includes EDI, AS2, FTPS, SMTP, HTTP, EDI, X12, and more.

## No-code solution

With nothing hidden in code, Partner Manager puts the power and control of integrating applications into the hands of the people who need the data.

### Built to work on Talend

Designed to work seamlessly with Talend integration and data platforms. Leverage Talend's leading ESB to plug into full B2B capabilities.
